

In this lecture, we will discuss...

HTML

Content Models

Block-Level Elements

- ✧ Render to begin on a new line (by default)
- ✧ May contain inline or other block-level elements
- ✧ Roughly Flow Content (HTML5 category)

- ✧ **HTML5 replaces these definitions with more complex set of content categories.**
- ✧ **However, this distinction remains practical because it aligns well with existing CSS rules.**

Inline Elements

- ✧ Render on the same line (by default)
- ✧ May only contain other inline elements
- ✧ Roughly Phrasing Content (HTML5 category)

Summary

- ✧ Compared block-level & inline content types
- ✧ Officially not part of HTML5, but still used
- ✧ Roughly equivalent to flow content & phrasing content
